PBSIT 013 – EVENT-DRIVEN PROGRAMMING

WEEKLY POST-DEPLOYMENT SYSTEM MONITORING AND EVALUATION REPORT

FINALS PERIOD | WEEK 14 – FUNCTIONALITY AND RELIABILITY | 100 POINTS

STRICT HARDCOPY PAGE LIMIT: The complete printed Week 14 monitoring report must NOT exceed TEN (10) PAGES TOTAL, including all report sections, screenshots, attachments, and signature page. Reports exceeding 10 printed pages do not comply with the submission instructions.

SEPARATE VIDEO REQUIREMENT: Submit one client/end-user monitoring video lasting 5–10 MINUTES. The 10-minute video limit is different from the 10-page printed-report limit.

Instructions: Complete the Week 14 report using actual deployed-system observations, client/end-user feedback, tests, and verifiable evidence. Focus on functionality, reliability, and verification of Week 13 corrective actions. Carry unresolved issues forward. Obtain separate signatures from the system owner/client representative and an actual system user; signatures confirm review/participation, not final acceptance. HARDCOPY LIMIT: Maximum 10 pages total, including screenshots, attachments, and signatories. Do not exceed 10 printed pages.

A. Monitoring Information

Information	**Entry**
Official System Title	NETSO Prints and Ads Centralized Printing and Service Request Management System
Group / Section	BSIT 3A
Group Members	Abon, Alexandrie C. Santiago, Adrian Lester G. Kudhail, Steevan
Monitoring Week / Date	Week 14 | Date: November 6, 2026
Deployment Location / Mode	NETSO Prints and Ads is a print and advertising shop in Malvar St., Victory Norte, Santiago City, Isabela / Web-based, online (cloud-hosted on Railway)
System Owner / Organization	NETSO Prints & Ads
Owner / Client Representative	King Jericson Barrozo (representing the shop owner, Sir Ron Valdez)
System Owner / Client Contact Number	09617751907
Actual End User (name / role)	King Jericson Barrozo – staff/admin (system user); also the client representative Participating Evaluator / Observer
Actual System User / End User Contact Number	09617751907
Monitoring Method	☒ Actual use ☒ Observation ☒ Interview ☒ Testing

B. System Usage and Weekly Assessment

Describe actual Week 14 usage, functions/modules exercised, user sessions (if known), failures or interruptions, and reliability observations. Specify which Week 13 problems were retested and whether the fixes worked:

Week 14 monitoring was conducted on November 6, 2026 with Sir King Jericson Barrozo (staff/admin) as the client representative, because the shop owner, Sir Ron Valdez, was busy. The group also explained the system's status and updates to him during the session.

Functions exercised: Service Requests (viewing pending tasks), Walk-In Request, payment confirmation using Cash on Pickup (GCash payment was not used), changing service rates, adding new services, size-based order computation, and login.

Failures and reliability: the system did not freeze or crash, and it loaded fast and consistently; the only connectivity problem was the internet signal. One problem occurred: walk-in requests added by the admin did not always appear in the Service Requests module, and the staff quickly re-entered them.

Week 13 problems retested: C1 (Word file support) – still not fixed. C2 (repetitive payment confirmation) – still failing. C3 (pricing) – fixed: admin and staff can now change the rates of every service, and the size-based computation was tested and works well. C4 (online GCash payment) – not used; only Cash on Pickup was used, and activation depends on whether Sir Ron decides to activate it, which was explained to the client representative. C5 (adding services) – fixed: admin and staff can now add new services.

New this week: C6 – walk-in requests are not stored in Service Requests; C7 – the client representative suggested adding change username and change password for customers; C8 – customers want to see their chat history, because the Staff Live Chat shows the conversation per order and it disappears once the order is finished, so the client representative asked that the chat module display the past conversations of every order.

Diagnostic rating: 1 = Poor, 2 = Needs Improvement, 3 = Satisfactory, 4 = Very Good, 5 = Excellent. Attach specific evidence. This rating is separate from the instructor's 100-point rubric.

Area	**Rating (1–5)**	**Observed Evidence / Remarks**
Functionality	4	Client remark: the system is functional and okay, but the repetitive process must really be changed.
Usability	5	Client remark: easy to use, especially on the customer's mobile side, and the admin side is the same; it still needs to be studied well.
Performance	4	Client remark: performance is okay – it loads fast and is consistent; the only problem is the internet signal.
Reliability	5	Client remark: very good, the shop can use it; only some parts should be improved.
Data Accuracy	4	Client remark: the data is accurate, except walk-in requests are not recorded on the admin side.
Security / Access Control	4	Client remark: okay on security because of the captcha and the "Continue with Google" sign-in.
TOTAL	26 / 30	

C. Identified Issues and Recommendations

ID / Module	**Observed Problem / User Impact**	**Recommendation (Fix / Modify / Replace)**	**Priority H/M/L**

ID / Module	Observed Problem / User Impact	Recommendation (Fix / Modify / Replace)	Priority H/M/L
C1 / Service Requests – file upload (Week 13 carry-over)	Function: uploading a Word (.docx) file with an order. Steps: upload a .docx file when placing an order. Impact: customers can only submit PDF files. Evidence: Week 14 retest – still not fixed.	Modify – accept Word files or auto-convert them to PDF; show accepted file formats before upload.	M
C2 / Payments – payment confirmation (Week 13 carry-over)	Function: confirming a customer's payment (Cash on Pickup). Steps: confirm a customer's payment as admin. Impact: multiple, repeated steps; time-consuming for the admin. Evidence: client feedback (E4, E5); Photos 4, 5, 10; still failing on retest.	Modify – make payment confirmation a single step or show one pop-up confirmation.	H
C4 / Online GCash payment (Week 13 carry-over)	Function: online GCash payment. Steps: not used this week; only Cash on Pickup was used. Impact: customers cannot yet pay online; activation depends on the owner, Sir Ron Valdez. Evidence: explained to the client representative; Photo 7.	Defer – activate only when the owner decides and the payment accounts are ready.	L
C6 / Walk-In Request → Service Requests (New, Week 14)	Function: Walk-In Request. Steps: admin adds a Walk-In Request, then opens Service Requests. Impact: some walk-in orders are not stored there, so staff must re-enter them. Evidence: client feedback (E2, E6); Photo 8.	Fix – make sure every walk-in request is saved and shown in Service Requests.	H
C7 / Customer account (New, Week 14)	Function: customer account settings. Steps: not applicable (client suggestion). Impact: customers cannot change their own username or password. Evidence: suggestion from the client representative.	Modify – add change username and change password for customers.	M

ID / Module	Observed Problem / User Impact	Recommendation (Fix / Modify / Replace)	Priority H/M/L
C8 / Staff Live Chat (customer side) (New, Week 14)	Function: Staff Live Chat – chat history. Steps: customer opens Staff Live Chat after an order is finished. Impact: the conversation of a finished order disappears, so customers cannot review past chats (the admin side can). Evidence: client representative's feedback; customer-side screenshot dated 11/6/2026.	Modify – make the chat module display the past conversations of every order (chat history).	M

For each Week 14 issue, identify the affected function, reproduction steps, user impact, priority, and supporting evidence. Clearly mark issues carried over from Week 13. If none, state "No issue observed," identify tests conducted, and attach evidence; do not invent problems.

D. Corrective Action and Follow-Up Log

Issue ID	Corrective Action / Assigned Member	Target Date	Status	Verification / Result
C1	Add .docx support or auto-convert to PDF. Assigned member: to be assigned	Before Week 15 monitoring	Pending	Still Failing
C2	Make payment confirmation a single step or one pop-up confirmation. Assigned member: to be assigned	Before Week 15 monitoring	Pending	Still Failing
C3	Rates per service made editable by admin/staff; size-based computation tested.	Week 14	Completed	Verified Fixed
C4	Activate online GCash payment only when the owner decides and the payment accounts are ready. Assigned member: to be assigned	Not yet set	Deferred	Not Yet Tested
C5	Admin and staff can add new services.	Week 14	Completed	Verified Fixed
C6	Fix walk-in requests so they are saved in Service Requests. Assigned member: to be assigned	Before Week 15 monitoring	Pending	New issue – retest in Week 15

Issue ID	Corrective Action / Assigned Member	Target Date	Status	Verification / Result
C7	Add change username and change password for customers. Assigned member: to be assigned	Before Week 15 monitoring	Pending	New suggestion – verify in Week 15
C8	Show the past chat conversations of every order in the customer's chat module. Assigned member: to be assigned	Before Week 15 monitoring	Pending	New suggestion – verify in Week 15

Status: Pending / In Progress / Completed / Deferred. For Week 13 carry-over items, record the retest performed and observed result (Verified Fixed / Still Failing / Not Yet Tested). Carry unresolved items forward to Week 15.

E. Actual Client and End-User Feedback

1. Which important system functions did you actually use this week, and did each one produce the expected result?

Sir King Jericson mainly used the Service Requests module because it lets the shop see its pending tasks, and it produced the expected result. He also went through the Walk-In Request and the payment confirmation flow using Cash on Pickup; GCash payment was not used. The payment flow worked, but it still takes multiple steps, and some walk-in requests did not appear in Service Requests. The customer-side Staff Live Chat was also checked; it works per order, and the conversation disappears once the order is finished.

This week's updates were also presented: admin and staff can now change the rates of every service and add new services, and the size-based order computation was tested and works well.

2. Did the system freeze, crash, slow down, disconnect, or fail to save data during use? When did it happen and how often?

The system did not freeze or crash, and it loaded fast and consistently; the only slowdown was caused by the internet signal. The only failure was that some orders added through Walk-In Request were not stored in the Service Requests module.

3. When an error or interruption occurred, could you continue your task or recover your data? What was the effect on your work?

Yes. The staff could continue working and recover the data by entering the order again. The effect on the work was small because the order could be re-entered quickly.

4. Which problems reported in Week 13 were fixed? After trying the same actions again, did the problems disappear or happen again?

The multiple-step payment process (C2) was not fixed; it still happened again when the same actions were repeated. Word file support (C1) is also not fixed yet. The fixes completed this week are: admin and staff can now change the rates of every service and add new services, and the size-based computation was tested and works well. Online GCash payment (C4) was not used; only Cash on Pickup was used, and activation depends on the owner, Sir Ron Valdez, who has to decide whether to activate it.

5. Which function or reliability issue should the developers fix first before the next monitoring week, and why?

The payment confirmation flow should be fixed first. The client suggested a single step, or a pop-up confirmation, so that confirming payments is no longer so time-consuming for the admin.

6. Were the records, transactions, and displayed information accurate and complete during actual use? Describe any incorrect or missing data.

All good. The records, transactions, and displayed information were accurate and complete, except that some walk-in requests were not recorded in Service Requests (see C6).

7. When you repeated the same task or used the system for a longer period, did it continue working consistently? Describe any changes in its behavior.

All good. The system kept working consistently when the same tasks were repeated.

8. What specific improvement would make the system more dependable for your daily work, and how should the group verify that improvement next week?

Improving the payment flow. The group will verify it next week by repeating the payment confirmation with the client representative and checking that it no longer needs multiple steps. The client representative also wants the chat module to display the past conversations of every order, which the group will verify next week by opening the chat of an already finished order.

F. Weekly Evidence Checklist

PRINTED REPORT: MAXIMUM 10 PAGES ONLY (including screenshots and signatures).

REQUIRED VIDEO EVIDENCE (5–10 MINUTES PER MONITORING WEEK)

Each group must submit one authentic, continuous or transparently edited 5–10-minute video showing the actual weekly monitoring session with the system owner/client representative and/or actual end user. The video must include a real conversation with the client/user, not only a narrated system demonstration. **STRICT TIME LIMIT: The video must be at least 5 minutes and must NOT exceed 10 minutes. Videos longer than 10 minutes are not compliant with the submission requirement.**

Video must show: (1) Week 14 date and participants; (2) actual system use with the client/end user; (3) checks of important functions and reliability; (4) retesting of Week 13 issues and observed outcomes; (5) client feedback and agreed corrective actions. Demonstrate relevant failures and fixes on screen when feasible.

Obtain permission before recording. Do not capture passwords, confidential records, or sensitive personal information. If recording a participant is not permitted, coordinate with the instructor for an approved alternative; do not fabricate evidence.

☐ 5–10-minute client/end-user monitoring video (MP4) ☐ Client/user recording consent ☐ **Verified video duration is within 5:00–10:00 minutes (not over 10:00)**

☒ Date-stamped screenshots / system logs ☐ Before-and-after evidence (if applicable) ☒ Test results

☒ Client/end-user feedback ☒ Updated issue and corrective-action logs ☐ Version/build or change record

Video filename:
WEEK14_NETSO_Prints_and_Ads_Centralized_Printing_and_Service_Request_Management_System_ClientMonitorin.mp4

Evidence folder / link: https://drive.google.com/drive/folders/1U09MBe41danqGCutgU-wX5WlJu2osKAm?usp=sharing

WEEK 14 VERIFICATION CHECKLIST: ☒ Critical functions tested ☒ Reliability observed ☒ Week 13 issues retested ☐ Fixes verified with evidence ☒ Remaining issues recorded

G. Weekly Instructor Evaluation Rubric

Criteria	Max	Score
System Functionality and Operational Performance	25	
Identification and Analysis of System Problems	20	
Quality and Feasibility of Recommendations	15	
Implementation and Verification of Corrective Actions	20	
Client Feedback and Actual Usage Evidence	10	
Completeness and Quality of Monitoring Documentation	10	
TOTAL	100	

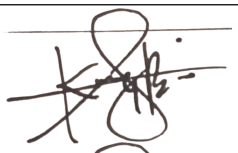

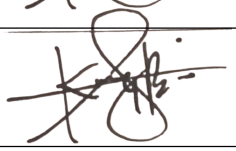

Scoring guide: Award full credit only for complete, demonstrated, verifiable work; partial credit for partially supported work; zero for absent or unsupported evidence. For the first week, assess verified corrective actions from the initial deployment findings.

Instructor comments / required next actions: _____

_____

H. Mandatory Signatures and Verification

Signatures must be obtained from two distinct persons when the owner/client representative and actual end user are different. If one person genuinely fills both roles, identify that fact and have the instructor approve the arrangement; do not invent a second signer.

Signatory	Printed Name / Position	Signature	Date
SYSTEM OWNER / CLIENT REPRESENTATIVE	King Jericson Barrozo Client Representative of the owner, Sir Ron Valdez		November 6, 2026
ACTUAL SYSTEM USER / END USER	King Jericson Barrozo Participating Evaluator / Observer		November 6, 2026
GROUP REPRESENTATIVE	Alexandrie C. Abon		November 6, 2026
INSTRUCTOR / EVALUATOR	King Christian D. Antonio, MIT, LPT		

Owner / Client Representative acknowledgment:

I confirm that the monitoring findings and recommendations were presented to me for review. My signature does not constitute final acceptance of the system.

Actual System User acknowledgment:

I confirm that I participated in system use, observation, or testing and that my feedback was documented to the best of my knowledge.

I. Weekly Monitoring Summary and Next-Week Commitments

Summary	Details
System status this week	☐ Operational ☒ Operational with issues ☐ Not operational
Highest-priority issue	C2 – Payment confirmation flow needs multiple steps (client's first fix request); also C6 – walk-in requests not stored in Service Requests
Changes completed and verified	C3 – admin and staff can now change the rates of every service, and the size-based computation was tested and works well; C5 – admin and staff can now add new services.
Unresolved / carry-over issues (Week 13 → Week 15)	C1 Word file support (still failing); C2 repetitive payment confirmation (still failing); C4 online GCash payment (deferred, depends on the owner); new: C6 walk-in requests, C7 customer change username/password, C8 chat history.
Required action before next monitoring	Fix the payment confirmation flow (C2) and walk-in storage (C6); add customer change username/password (C7), chat history for every order (C8), and Word file support (C1); re-test with the client.
Next monitoring date	Week 15 – date to be confirmed with the client

J. Finals Monitoring Schedule (Reference)

Week	Monitoring Focus	Expected Evidence
13	Post-deployment baseline	Initial issues and usage observations
14	Functionality and reliability	Verified fixes and updated issue log
15	Usability and client experience	UI/UX improvements and user feedback
16	Data accuracy, security, performance	Tests and corrective-action evidence
17	Final client feedback and refinement	Verified outstanding improvements
18	Final consolidated evaluation (separate report)	Summary of weekly findings and final demonstration

WEEK 14 SUBMISSION: Submit one signed printed report (STRICT MAXIMUM 10 PAGES, including screenshots and signature page), one digital report, the required 5–10-minute client/end-user monitoring video, and authentic supporting evidence. Use readable, selected screenshots and refer to additional digital evidence when needed. Do not shrink text to unreadable sizes to meet the page limit. Clearly distinguish proposed changes from verified fixes. Video must be 5:00–10:00 minutes only.

Attachment – Week 14 Evidence Photos (November 6, 2026)

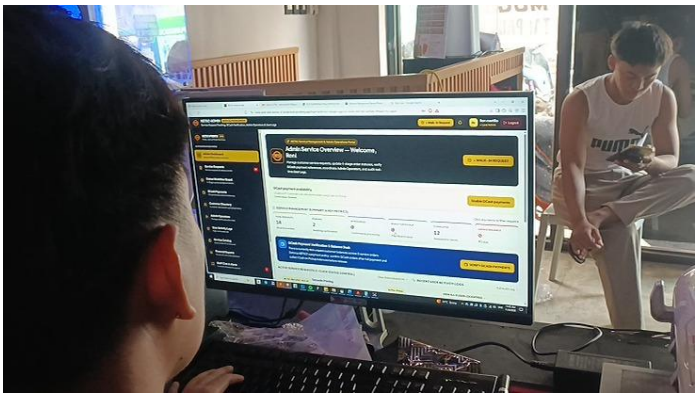

Photo 1 – Admin dashboard (Service Overview) during the monitoring session.

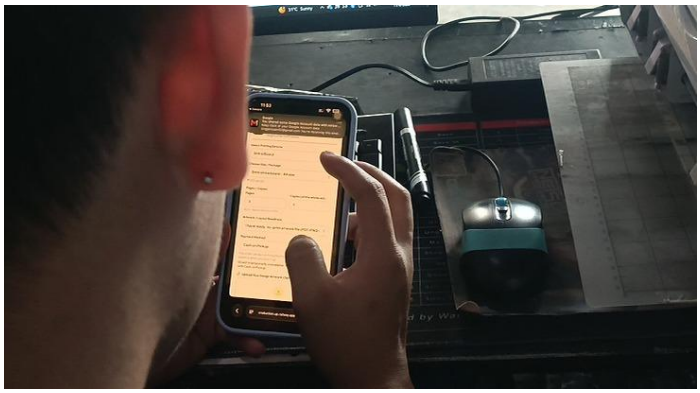

Photo 2 – Customer mobile side: print request form with Cash on Pickup.

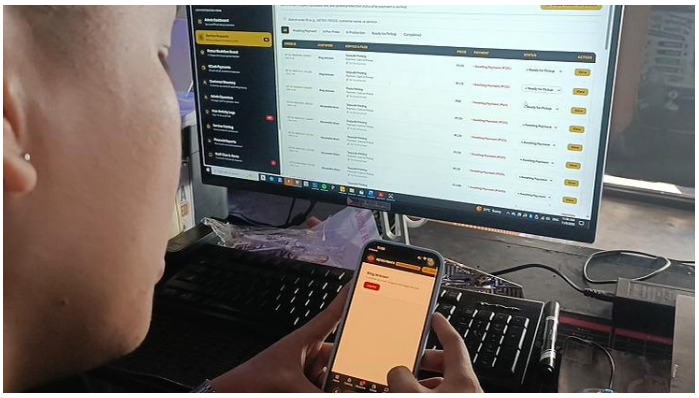

Photo 3 – Admin Service Requests list while the customer mobile view is checked.

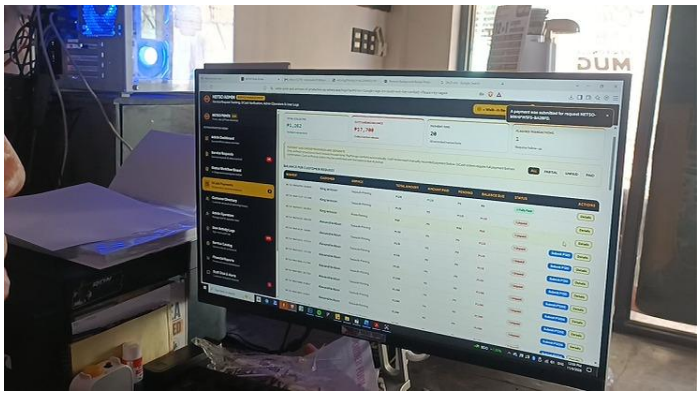

Photo 4 – Payments module: payment-submitted notice and per-request buttons (C2).

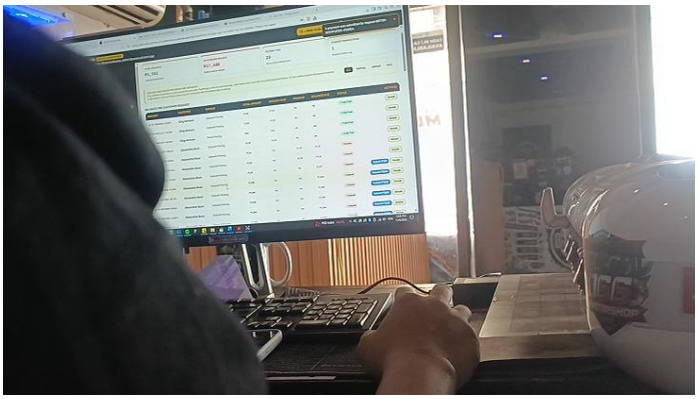

Photo 5 – Payments module: balance per customer request list (C2).

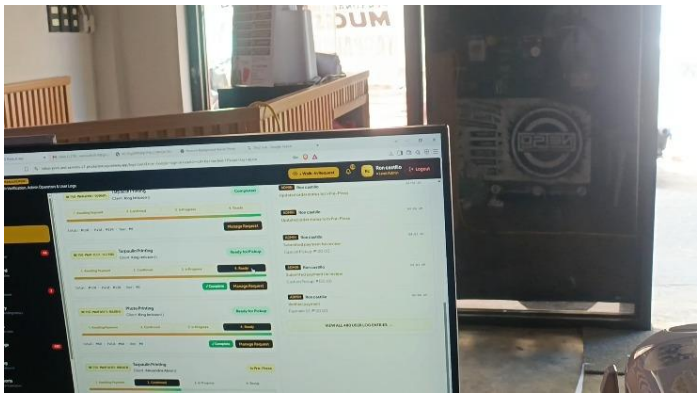

Photo 6 – Status Workflow Board: orders moving to Ready for Pickup, with activity log.

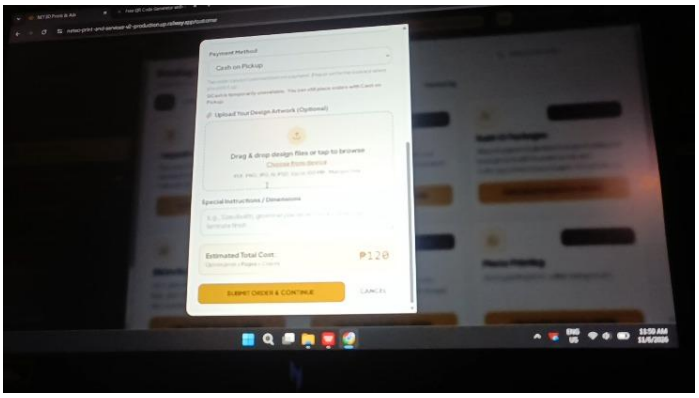

Photo 7 – Order form: Cash on Pickup selected; GCash is temporarily unavailable (C4).

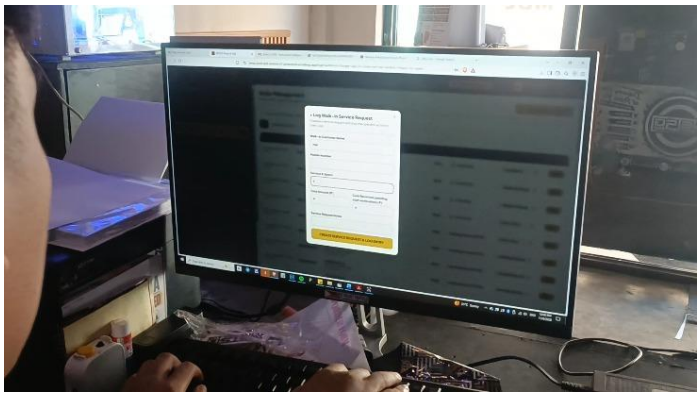

Photo 8 – Log Walk-In Service Request form (C6).

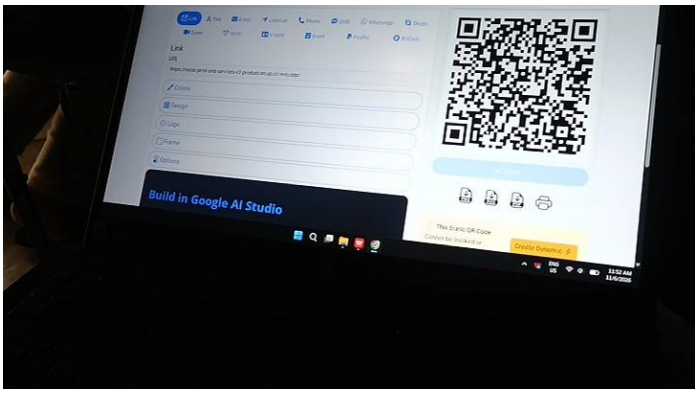

Photo 9 – QR code generator with the system link.

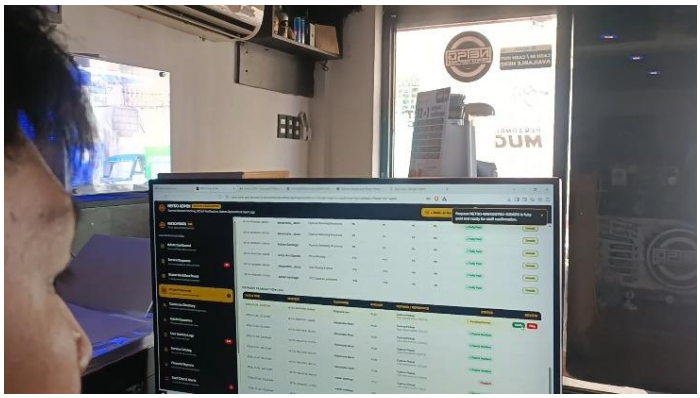

Photo 10 – Payments module: transaction log with verify buttons (C2).
